## Welcome to DialogLink - Version 5 Revolutionize the Way You Work!

### New on Dialog

#### **Order Patent and Trademark File Histories Through Dialog**

*Thomson File Histories* are now available directly through *Dialog*. Combined with the comprehensive patent and trademark information on *Dialog*, file histories give you the most complete view of a patent or trademark and its history in one place. When searching in the following patent and trademark databases, a link to an online order form is displayed in your search results, saving you time in obtaining the file histories you need.

*Thomson File Histories* are available from the following *Dialog* databases:

- CLAIMS/Current Patent Legal Status (File 123)
- CLAIMS/U.S. Patents (File 340)
- Chinese Patent Abstracts in English (File 344)
- Derwent Patents Citation Index (File 342)
- Derwent World Patents Index (for users in Japan) (File 352)
- Derwent World Patents Index First View (File 331)
- Derwent World Patents Index (File 351)
- Derwent World Patents Index (File 350)
- Ei EnCompassPat (File 353)
- European Patents Fulltext (File 348)
- French Patents (File 371)
- German Patents Fulltext (File 324)
- IMS Patent Focus (File 447, 947)
- INPADOC/Family and Legal Status (File 345)
- JAPIO - Patent Abstracts of Japan (File 347)
- LitAlert (File 670)
- U.S. Patents Fulltext (1971-1975) (File 652)

- U.S. Patents Fulltext (1976-present) (File 654)
- WIPO/PCT Patents Fulltext (File 349)
- TRADEMARKSCAN - U.S. Federal (File 226)

#### **DialogLink 5 Release Notes**

New features available in the latest release of DialogLink 5 (August 2006)

- Ability to resize images for easier incorporation into DialogLink Reports
- New settings allow users to be prompted to save Dialog search sessions in the format of their choice (Microsoft Word, RTF, PDF, HTML, or TEXT)
- Ability to set up Dialog Alerts by Chemical Structures and the addition of Index Chemicus as a structure searchable database
- Support for connections to STN Germany and STN Japan services

\*\*\* ANNOUNCEMENTS \*\*\*

\*\*\*

\*\*\* FREE FILE OF THE MONTH (April) Prompt and Trade & Industry Database (Files 16 and 148)

Each month Dialog offers an opportunity to try out new or unfamiliar sources by offering \$100 of free searching (either DialUnits or connect time) in one specific file. Output and Alerts charges are not included. For more details visit:

<http://www.dialog.com/freefile/> and then take a moment to get familiar with another great Dialog resource.

\*\*\* "Thomson File Histories" are now available directly through Dialog in selected patent and trademark files. Combined with the comprehensive patent and trademark information on Dialog, file histories give you the most complete view of a patent or trademark and its history in one place. When searching in one of the patent

and trademark databases, a link to an online order form is displayed in your search results, saving you time in obtaining the file histories you need. See HELP FILEHIST for more information about how to use the link and a list of files that contain the link.

#### NEW FILE

\*\*\*File 651, TRADEMARKSCAN(R) - China. See HELP NEWS 651 for details.

#### RESUMED UPDATING

\*\*\*File 523, D&B European Financial Records

\*\*\*

#### RELOADS COMPLETED

\*\*\*Files 154&155, MEDLINE(R)

\*\*\*File 669, TRADEMARKSCAN(R) - Japan

\*\*\*File 126, TRADEMARKSCAN(R) - United Kingdom

\*\*\*File 228, TRADEMARKSCAN(R) - Spain

\*\*\*File 672, TRADEMARKSCAN(R) - Germany

\*\*\*File 655, TRADEMARKSCAN(R) - Korea

\*\*\*File 656, TRADEMARKSCAN(R) - Australia

\*\*\*File 657, TRADEMARKSCAN(R) - France

\*\*\*File 673, TRADEMARKSCAN(R) - Italy

\*\*\*

#### FILES RENAMED

\*\*\*File 321, PLASPEC now known as Plastic Properties Database

\*\*\*

#### FILES REMOVED

\*\*\*File 301, CHEMNAME - please use File 398 ChemSearch

\*\*\*File 388, PEDS: Defense Program Summaries

\*\*\*File 588, DMS-FI Contract Awards

**Abstract:** Triblock copolymer surfactants consisting of poly(ethylene oxide) (PEO) and poly(propylene oxide) (PPO), Pluronic L61 (PEO-PPO-PEO, L61) and Pluronic 25R2 (PPO-PEO-PPO, 25R2) were exploited in aqueous micellar two-phase systems for the protein extraction. The extraction was based on the phase separation into surfactant-depleted and -condensed phases (an aqueous and a surfactant-rich phases, respectively) upon warming aqueous micellar solutions of triblock copolymer. In both systems, hydrophilic proteins such as albumin were not extracted into the surfactant-rich phase. On the other hand, hydrophobic cytochrome b(5) was well extracted in the L61 system due to hydrophobic interaction. However, the extraction of cytochrome b(5) was not observed in the 25R2 system. This abnormal extractability of cytochrome b5 in the 25R2 system was explained by the enhanced excluded-volume interaction between cytochrome b(5) and 25R2 micellar network in the surfactant-rich phase, which overcomes the hydrophobic interaction. Additionally, ionic surfactants were added into the systems for controlling extractability of proteins. In the 25R2 system, cationic tetradecyltrimethylammonium was effective for extracting anionic cytochrome bs against the excluded-volume effect, while not for anionic albumin because of its large molecular weight. In 25R2 system containing ionic surfactant, the partitioning of proteins were found to be governed by the hydrophobic, excluded-volume, and electrostatic interactions. Micellar network formed by 25R2 type of surfactant with a strong excluded-volume interaction could provide new selective extraction systems for the separation of proteins. **Abstract:** Surface modification with hydrophilic polymers has been beneficial in improving blood compatibility of biomaterials. Formation of dense and tightly-bonded surface layers may prevent plasma protein adsorption owing to steric repulsion. General conditions for formation of layers, protecting blood components from direct contacts with the surface, are discussed. It seems to be necessary to ensure a delicate balance between adsorption energy of the attached chains and their length. The crucial point is to get a high grafting density which is more influential than high chain length. Length should be calibrated to the size of protein molecules to meet both effective repulsion and high density of the protecting chains and to avoid chain displacement by plasma proteins.
